

// senior software engineer · ~8 yrs · 3d / shaders / realtime

GEORGI MKHITARYAN

I build the stuff that runs at 60 fps and won't fall over — shaders, metaverse worlds, realtime multiplayer, and the gnarly hardware-to-cloud plumbing nobody else wants to touch.

// flagship · client project

ev1000.net

FULL-STACK · SOLO

White-label EV-charging platform (CSMS) for a client — built solo, end to end: landing site, React Native app (iOS + Android), backend, CSMS ↔ charger comms over OCPP 1.6J, and payment integration.

// experience

Senior Software Engineer · SoftConstruct

2022 — now

- Shipped immersive 3D metaverse worlds — Unity→WebGL pipelines + custom GLSL, streamed to the browser.
- Tuned heavy 3D scenes (geometry, draw calls, streaming) to stay interactive down to low-end devices.
- Stood up authoritative Colyseus multiplayer over WebSockets, with Web3 integration.

Software Engineer · AiMit

2021 — 2022

- Built responsive front-ends in modern JS; profiled and tuned for faster, smoother interactions.

Software Engineer · NWSLAB

2020 — 2021

- High-performance web platforms with real-time mechanics across client, network and state.
- Shipped shared design systems + modular UI on clean, reusable React architecture.

Three.js Developer · M&D Systems

2020 — 2021

- Interactive Three.js web/mobile apps + product visualizations, tuned smooth across devices.

Full Stack Developer · Arakssys

2018 — 2020

- 3D-driven interfaces + full-stack delivery; owned concept → 3D design → launch.
